

Superior Clamping and Gripping

## Product data sheet

### Universal linear module LM

# Reliable. Precise. Modular.

## Universal linear module LM

Linear module with pneumatic drive and pre-loaded crossed roller bearings, free from play in dovetail rails

### Field of application

For use in clean environments, such as assembly and testing systems. Optimum standard solution for high-precision applications.

### Advantages – Your benefits

**Closed slide construction** for high rigidity

**Shock absorbers and proximity switches integrated in the projecting surfaces** for vibration-free movements and end position monitoring

**Compact dimensions** for minimum interfering contours of the entire system

**Pretensioned junction rollers** That means absolutely scope-free

**High basic load ratings** in all load directions

**Several intermediate positions possible** for maximum flexibility in applications

**Standardized mounting bores** for numerous combinations with other components from the modular system

**Rod lock by means of clamping cartridge** for safety in case of emergency stops

## Functional description

The slide is guided with pretensioned crossed rollers at the base body and driven with a double-acting pneumatic cylinder which is integrated in the base body.

① **Cross roller guidance**  
Pretensioned and scope-free

② **Drive**  
Powerful piston rod cylinders

③ **Mounting pattern**  
Completely integrated in the module system

④ **Switching cam**  
for inductive proximity switch

⑤ **End position adjustability**  
Convenient adjustment using the shock absorber threads

⑥ **Sensor system**  
with sensor driver for convenient adjustment

⑦ **Damping adjustment**  
Adjustment of the damping characteristics

## General notes about the series

**Housing material:** Aluminum alloy, anodized

**Guidance:** Backlash-free, pre-loaded cross roller guide

**Actuation:** pneumatic, with filtered compressed air as per ISO 8573-1:2010 [7:4:4].

**Scope of delivery:** Shock absorber and driver for proximity switch

**Warranty:** 24 months

**Service life characteristics:** on request

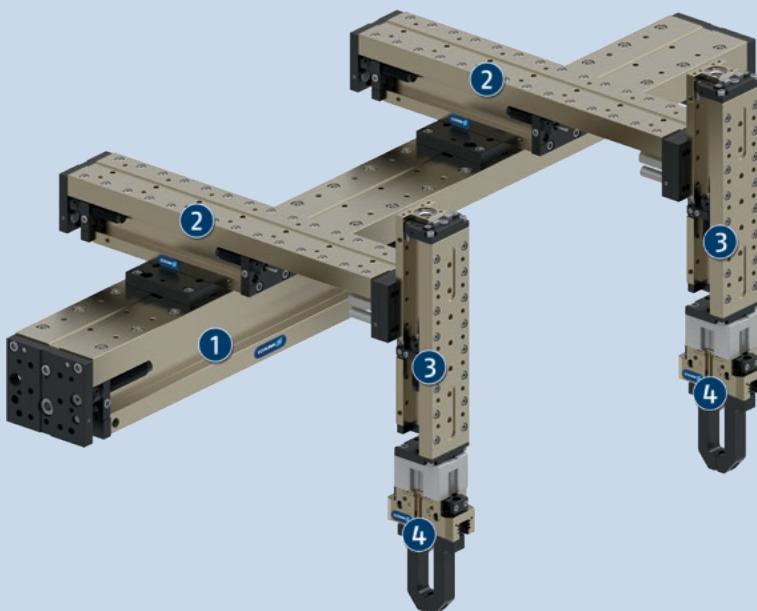

**Repeat accuracy:** is defined as a distribution of the end positions for 100 consecutive cycles.

**Travel times:** are pure movement times of the slide or the base body. Valve switching times, hose filling times, or PLC reaction times are not a part of this and are to be considered when cycle times are calculated.

**Stroke:** is the maximum nominal stroke of the unit. It can be shortened on both sides by the shock absorbers.

**Layout or control calculation:** For configuration or control calculation of the units, we recommend to use our Toolbox software, which is available online. A control calculation for the selected unit must be carried out to prevent overloading.

**Ambient conditions:** The modules are mainly designed for the use in clean ambient conditions. Please note that the life time of the modules can shorten if they are used in harsh ambient conditions, and that SCHUNK cannot assume liability in such cases. Please contact us for assistance.

## Application example

Double three-axis gantry with superimposed machining areas for high throughput rates and simultaneous work processes

- ① Linear module LM
- ② Linear module LM

- ③ Linear module CLM
- ④ Universal gripper PGN-plus

## SCHUNK offers more ...

The following components make the product even more productive – the suitable addition for the highest functionality, flexibility, reliability, and controlled production.

Vane swivel unit

Rotary indexing table

Gripper for small components

Universal gripper

Intermediate stop

Intermediate stop cylinder

Pillar assembly system

Rotary gripper module

Rod lock

Pressure maintenance valve

Inductive proximity switches

ⓘ For more information on these products can be found on the following product pages or at schunk.com.

## Options and special information

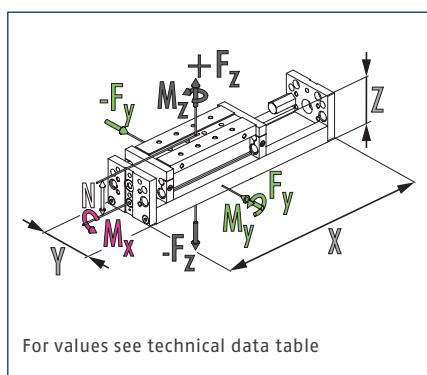

**Version rod lock:** prevents the structure from falling in the event of a sudden loss of energy. This module can be combined as standard with many elements from the modular system. We can assist you with questions.

# LM 25

Universal linear module

## Dimensions and maximum loads

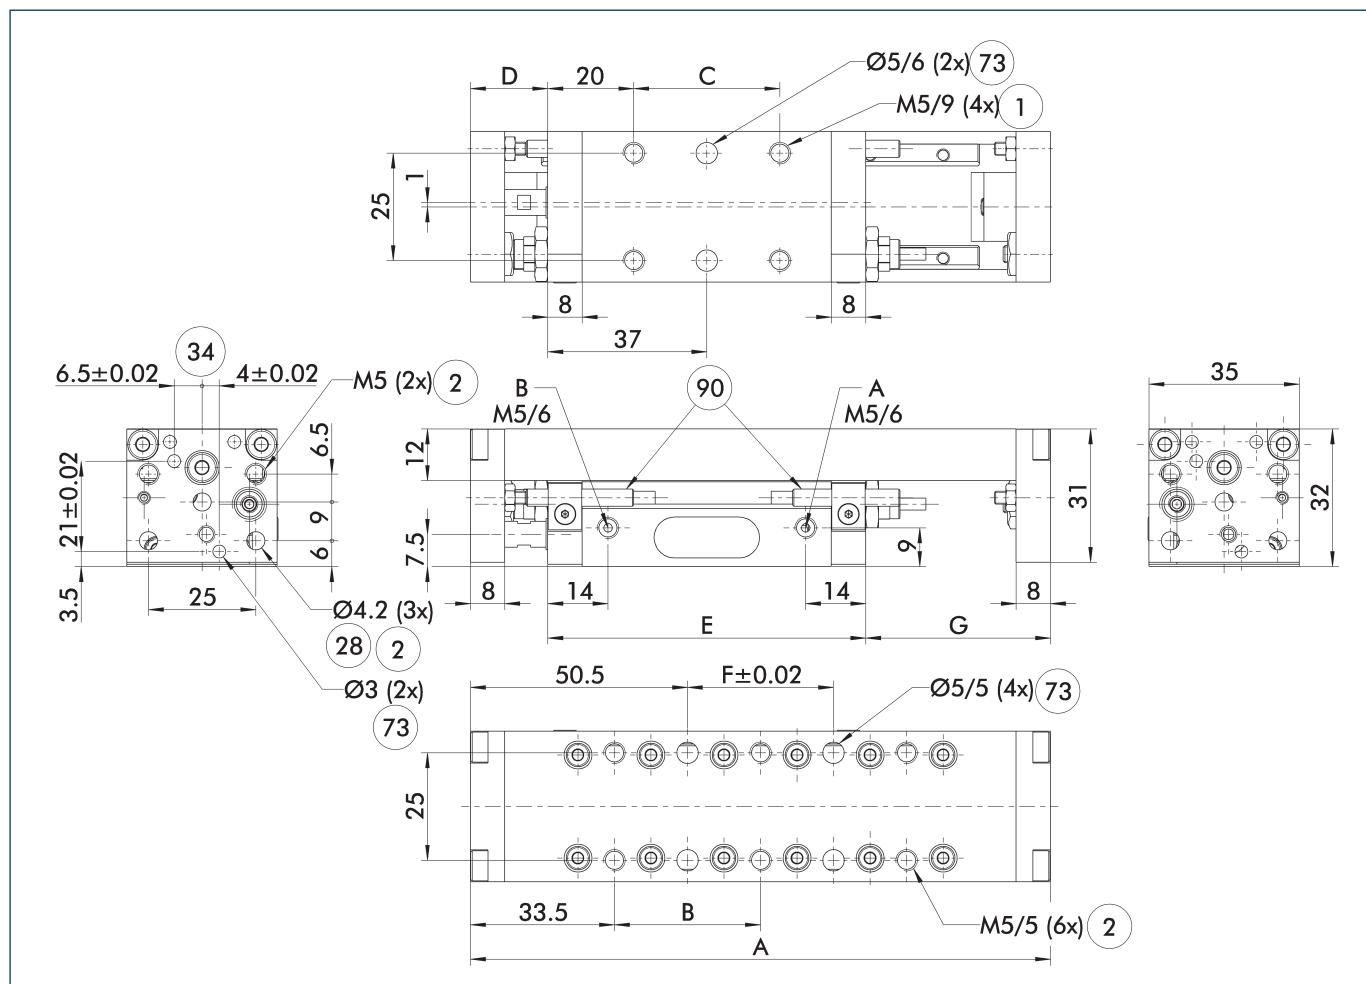

For values see technical data table

- ① The indicated forces and moments are maximum values for single load. If more than one force and/or torque occurs simultaneously, the case of application can be calculated by using the Toolbox. The force  $F_y$  can only be calculated by using the Toolbox.

## Modular Assembly Automation

- ④ Grippers  
⑯ Linear module CLM/KLM/LM/ELP/  
ELM/ELS/HLM

Grippers and linear modules can be combined with standard adapter plates from the modular assembly system. For more information see our main catalog "Modular Assembly Automation".

### Intermediate stop, ZZA on the piston side

⑯ Air connection

⑯ Intermediate stroke

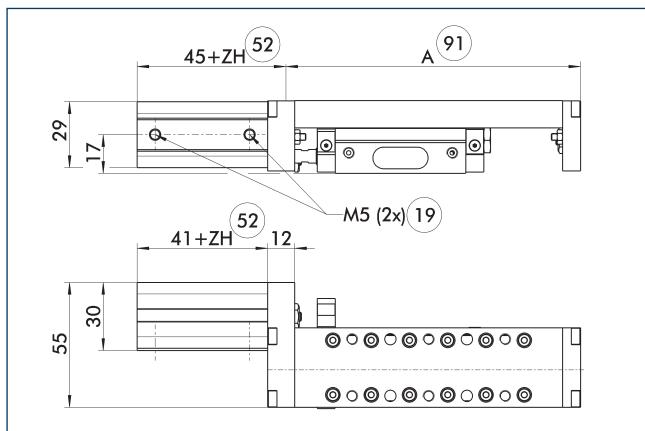

⑯ Overall length "A," the variant without intermediate stroke (see measurement chart of stroke variants)

The intermediate position is measured from the respective end position.

The intermediate position can be approached from both sides and can proceed in the original stroke direction. The holding force is the piston force of the intermediate stop less the piston force of the linear module.

Description	Holding force [N]	With 0mm stroke [kg]	Weight per mm stroke [kg]
<b>Intermediate stop</b>			
ZZA 26	54	0.2	0.002

① Sample order LM 25-H059-ZZA026-H15

**Intermediate stop, ZZA on the piston rod side**

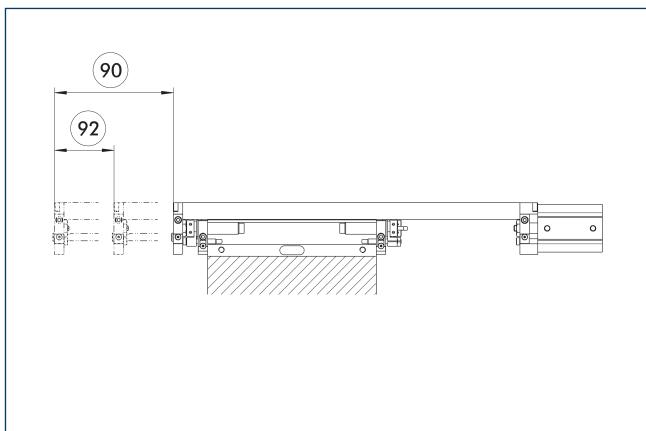

- ⑯ Air connection  
 ⑰ Intermediate stroke

⑱ Overall length "A," the variant without intermediate stroke (see measurement chart of stroke variants)

The intermediate position is measured from the respective end position. The intermediate position can be approached from both sides and can proceed in the original stroke direction. The holding force is the piston force of the intermediate stop less the piston force of the linear module.

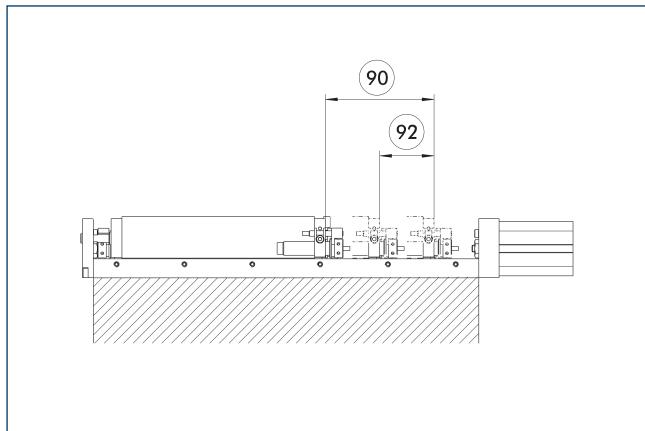

Description	Holding force [N]	With 0mm stroke [kg]	Weight per mm stroke [kg]
<b>Intermediate stop</b>			
ZZA 27	54	0.2	0.002

① Sample order LM 25-H059-ZZA027-H15

**Design – variant 1**

- ⑲ Nominal stroke  
 ⑳ Intermediate stroke

The corresponding intermediate stroke (ZH) is calculated by subtracting the intermediate stop cylinder stroke from the nominal stroke of the module. The intermediate stroke adjustment is  $\pm 3$  mm.

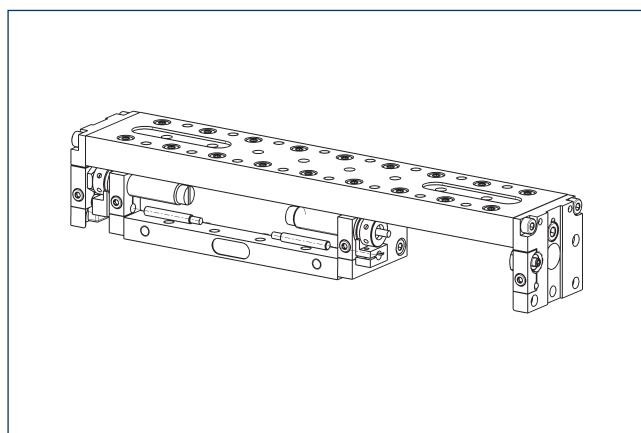

**Design – variant 2**

- ㉑ Nominal stroke

- ㉒ Intermediate stroke

The corresponding intermediate stroke (ZH) is calculated by subtracting the intermediate stop cylinder stroke from the nominal stroke of the module. The intermediate stroke adjustment is  $\pm 3$  mm.

## Inductive proximity switches

Directly mounted end position monitoring.

## Attachment to a pillar assembly system

- 4 Linear unit  
90 Double mounting plate, APDH  
91 Pillars, hard-chromium plated, ground  
92 Double socket SOD

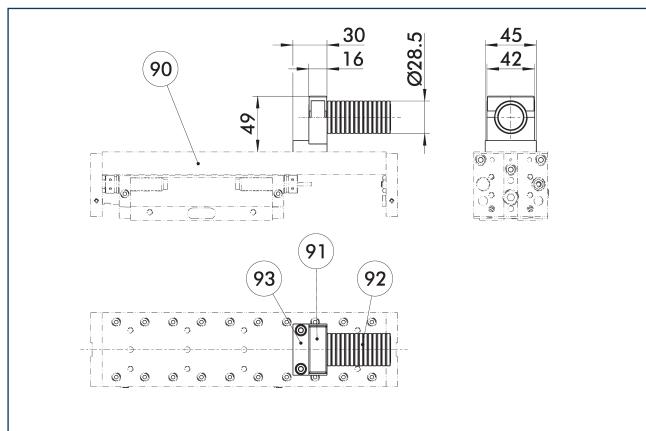

This unit can be attached to the pillar assembly system as standard. See the Kombibox software, which can be found online, for the right arrangement for your application.

Universal linear module

## Media routing hose module Ø 21

- ⑨0 Linear module
- ⑨1 Tube fastener MFB

- ⑨2 Tube MFS
- ⑨3 Tube plate SPL

Media routing with direct mounting on SCHUNK standard modules.

Description	ID	
Pillar assembly system media feed-through		
SPL 50	0313692	

## LMZAW intermediate stop

- ⑨ Nominal stroke

- ⑯ Air connection

- ⑮ Damping stroke adjustment range

- ⑯ Stroke adjustment range

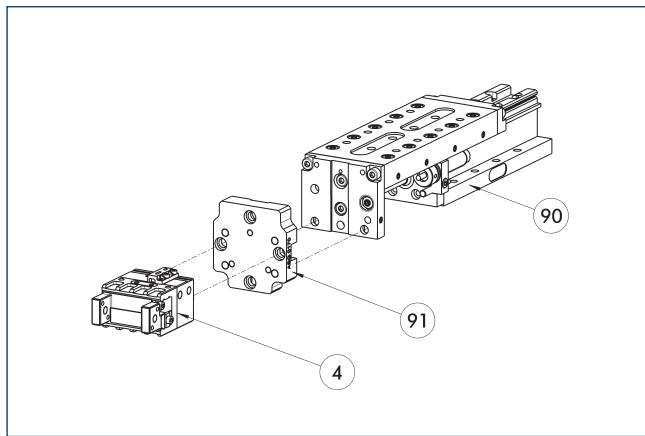

- ⑨0 Grid dimension, stroke adjustment

- ⑨1 Intermediate stroke (min. 12.5 mm/max. nominal stroke H-4 mm)

Depending on the application, the end position can be approached without a repeat stroke. The possible operating cycles can be obtained from the operating manual

Description	ID	Weight
		[kg]
Intermediate stop	LMZAW 100	0.98

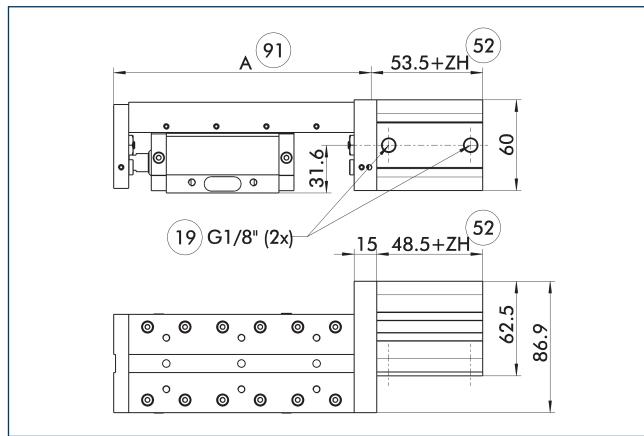

## Modular Assembly Automation

- ④ Grippers
- ⑨0 Linear module CLM/KLM/LM/ELP/ELM/ELS/HLM

Grippers and linear modules can be combined with standard adapter plates from the modular assembly system. For more information see our main catalog "Modular Assembly Automation".

## Intermediate stop, ZZA on the piston side

- ⑯ Air connection

- ⑯ Intermediate stroke

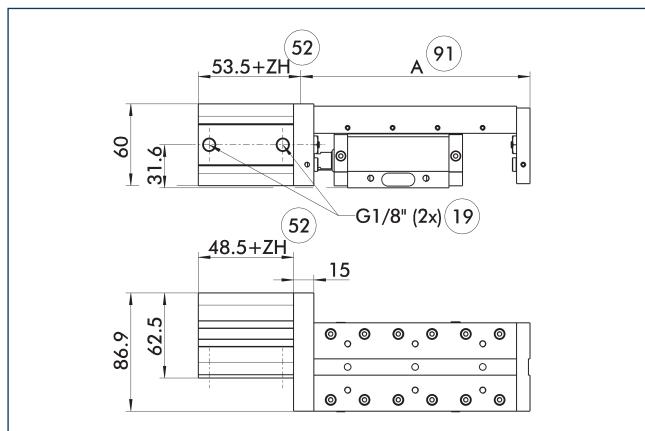

- ⑨1 Overall length "A," the variant without intermediate stroke (see measurement chart of stroke variants)

The intermediate position is measured from the respective end position. The intermediate position can be approached from both sides and can proceed in the original stroke direction. The holding force is the piston force of the intermediate stop less the piston force of the linear module.

Description	Holding force [N]	With 0mm stroke [kg]	Weight per mm stroke [kg]
Intermediate stop ZZA 101	460	0.75	0.006

① Sample order LM 100-H100-ZZA101-H30

### Intermediate stop, ZZA on the piston rod side

- ⑯ Air connection  
⑯ Intermediate stroke

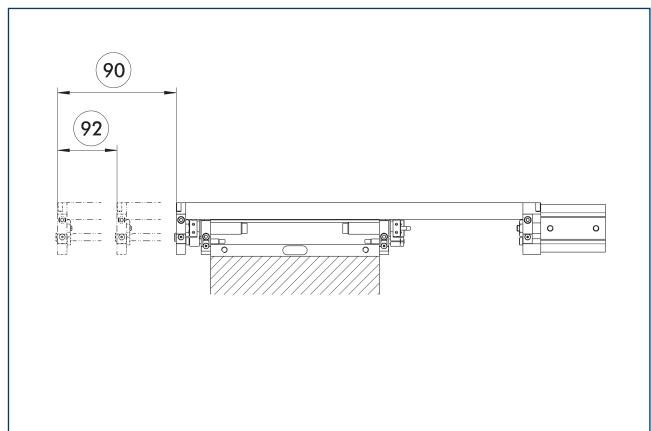

⑯ Overall length "A," the variant without intermediate stroke (see measurement chart of stroke variants)

The intermediate position is measured from the respective end position. The intermediate position can be approached from both sides and can proceed in the original stroke direction. The holding force is the piston force of the intermediate stop less the piston force of the linear module.

Description	Holding force [N]	With 0mm stroke [kg]	Weight per mm stroke [kg]
<b>Intermediate stop</b>			
ZZA 102	460	0.75	0.006

① Sample order LM 100-H100-ZZA102-H30

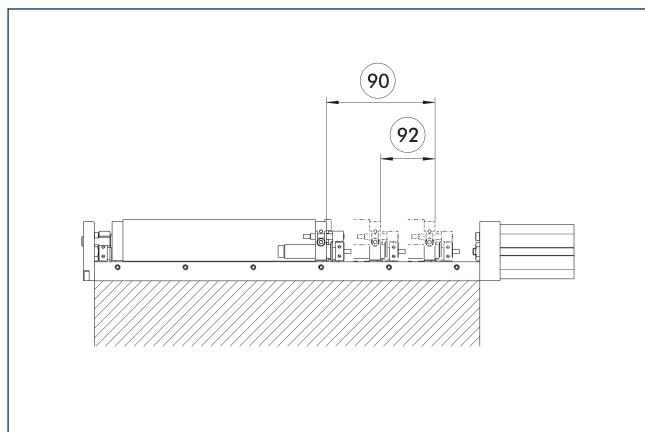

### Design – variant 1

- ⑯ Nominal stroke  
⑯ Intermediate stroke

The corresponding intermediate stroke (ZH) is calculated by subtracting the intermediate stop cylinder stroke from the nominal stroke of the module. The intermediate stroke adjustment is  $\pm 3$  mm.

### Design – variant 2

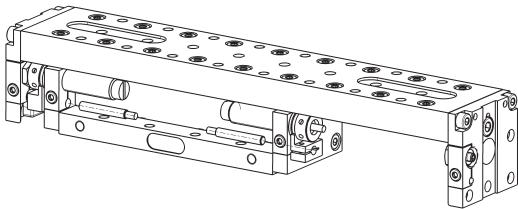

- ⑯ Nominal stroke  
⑯ Intermediate stroke

The corresponding intermediate stroke (ZH) is calculated by subtracting the intermediate stop cylinder stroke from the nominal stroke of the module. The intermediate stroke adjustment is  $\pm 3$  mm.

- ① Two sensors are required per unit for monitoring two positions. On option, extension cables and sensor distributors are available.  
Additional product variants of the sensor, and further information and technical data can be found in the catalog chapter sensor system.

## Dimensions and maximum loads

① The indicated forces and moments are maximum values for single load. If more than one force and/or torque occurs simultaneously, the case of application can be calculated by using the Toolbox. The force  $F_y$  can only be calculated by using the Toolbox.

## Attachment to a pillar assembly system

- 4 Linear unit  
90 Double mounting plate, APDH  
91 Pillars, hard-chromium plated, ground  
92 Double socket SOD

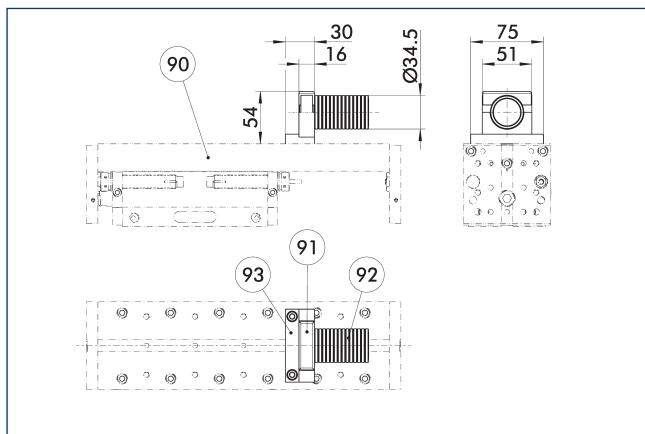

This unit can be attached to the pillar assembly system as standard. See the Kombibox software, which can be found online, for the right arrangement for your application.

Universal linear module

## Media routing hose module Ø 29

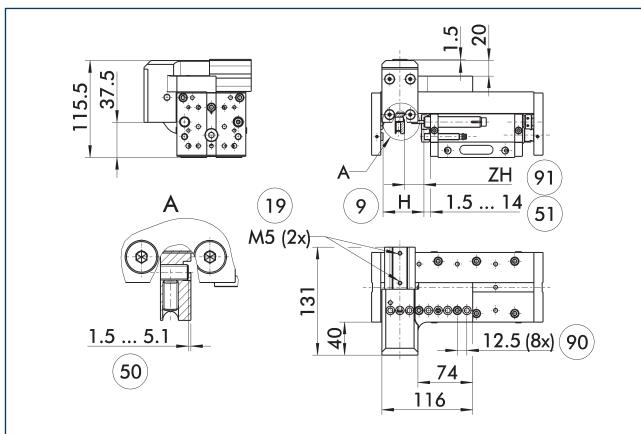

- ⑨0 Linear module
- ⑨1 Tube fastener MFB

- ⑨2 Tube MFS
- ⑨3 Tube plate SPL

Media routing with direct mounting on SCHUNK standard modules.

Description	ID
Pillar assembly system media feed-through	
SPL 200	0313693

## LMZAW intermediate stop

- ⑨ Nominal stroke

- ⑯ Air connection

- ⑯ Damping stroke adjustment range

- ⑯ Stroke adjustment range

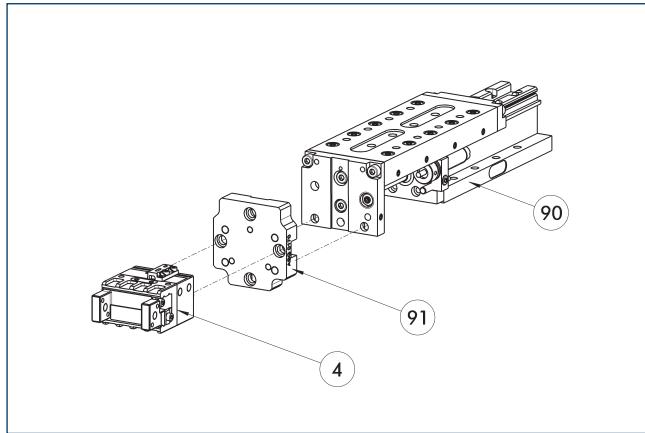

- ⑨0 Grid dimension, stroke adjustment

- ⑨1 Intermediate stroke (min. 12.5 mm/max. nominal stroke H-4 mm)

Depending on the application, the end position can be approached without a repeat stroke. The possible operating cycles can be obtained from the operating manual

Description	ID	Weight
		[kg]
Intermediate stop	LMZAW 200	0314116

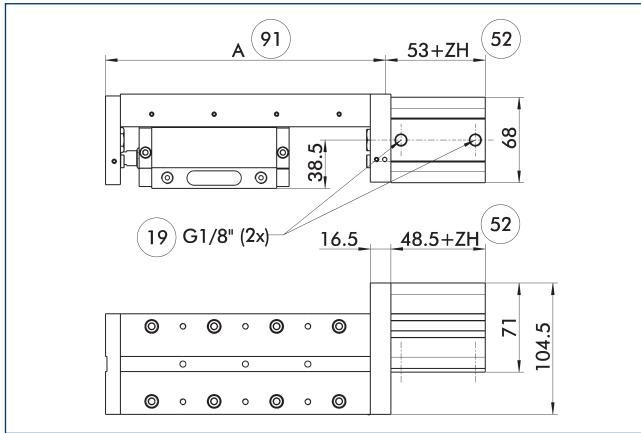

## Modular Assembly Automation

- ④ Grippers
- ⑨0 Linear module CLM/KLM/LM/ELP/ELM/ELS/HLM
- ⑨1 ASG adapter plate

Grippers and linear modules can be combined with standard adapter plates from the modular assembly system. For more information see our main catalog "Modular Assembly Automation".

## Intermediate stop, ZZA on the piston side

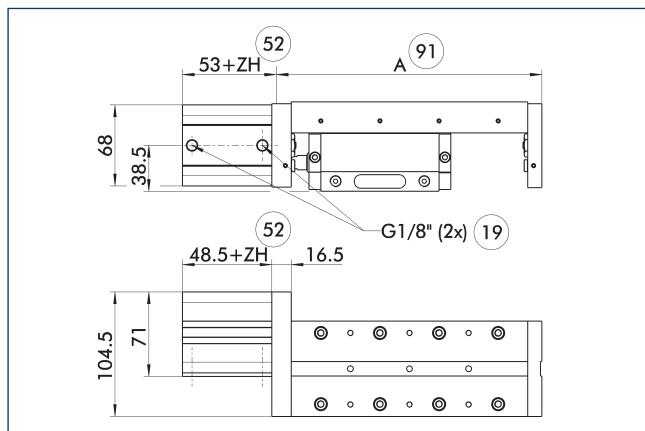

- ⑯ Air connection
- ⑯ Intermediate stroke
- ⑨1 Overall length "A," the variant without intermediate stroke (see measurement chart of stroke variants)

The intermediate position is measured from the respective end position. The intermediate position can be approached from both sides and can proceed in the original stroke direction. The holding force is the piston force of the intermediate stop less the piston force of the linear module.

Description	Holding force [N]	With 0mm stroke [kg]	Weight per mm stroke [kg]
Intermediate stop ZZA 201	696	0.9	0.008

① Sample order LM 200-H100-ZZA201-H30

### Intermediate stop, ZZA on the piston rod side

- ⑯ Air connection  
 ⑰ Intermediate stroke

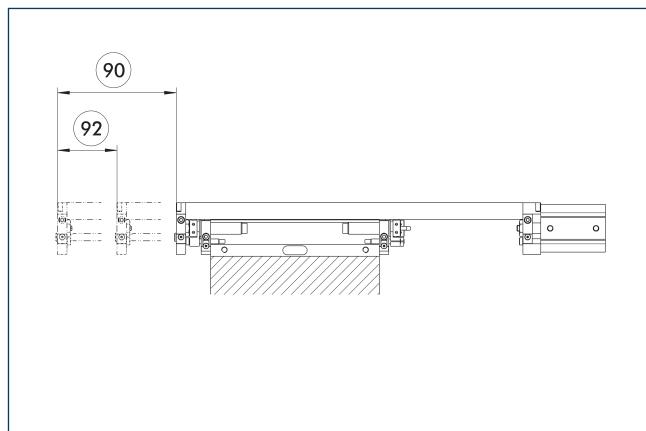

⑱ Overall length "A," the variant without intermediate stroke (see measurement chart of stroke variants)

The intermediate position is measured from the respective end position. The intermediate position can be approached from both sides and can proceed in the original stroke direction. The holding force is the piston force of the intermediate stop less the piston force of the linear module.

Description	Holding force [N]	With 0mm stroke [kg]	Weight per mm stroke [kg]
<b>Intermediate stop</b>			
ZZA 202	696	0.9	0.008

① Sample order LM 200-H100-ZZA202-H30

### Design – variant 1

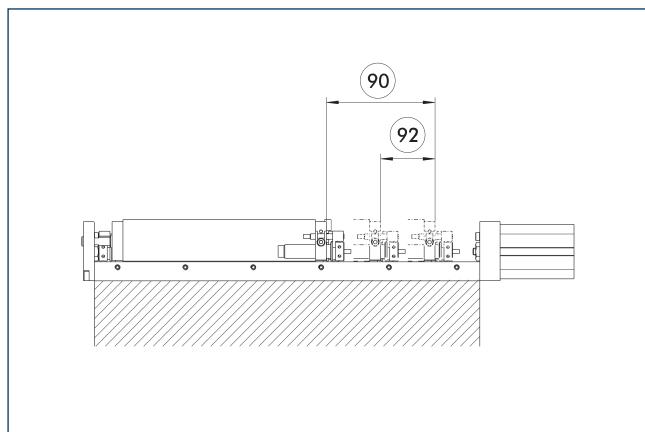

- ⑲ Nominal stroke

- ⑳ Intermediate stroke

The corresponding intermediate stroke (ZH) is calculated by subtracting the intermediate stop cylinder stroke from the nominal stroke of the module. The intermediate stroke adjustment is  $\pm 3$  mm.

### Design – variant 2

- ㉑ Nominal stroke

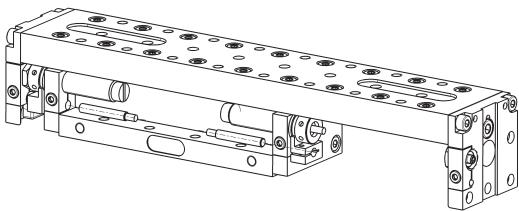

- ㉒ Intermediate stroke

The corresponding intermediate stroke (ZH) is calculated by subtracting the intermediate stop cylinder stroke from the nominal stroke of the module. The intermediate stroke adjustment is  $\pm 3$  mm.

Universal linear module

## Dimensions and maximum loads

For values see technical data table

- ① The indicated forces and moments are maximum values for single load. If more than one force and/or torque occurs simultaneously, the case of application can be calculated by using the Toolbox. The force  $F_y$  can only be calculated by using the Toolbox.

# LM 300

Universal linear module

## Rod lock

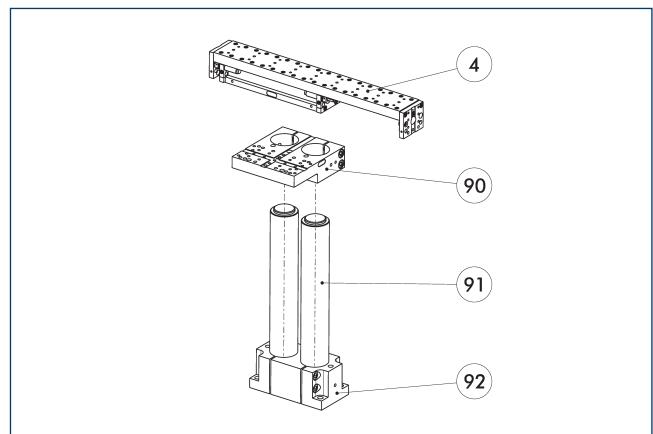

- ③ Pneumatic connection for holding brake

The rod lock prevents weights from falling in the event of energy loss, such as emergency stop situations. The rod lock can also be retrofitted, but this will reduce the nominal stroke.
